Microsoft Power Apps

Adapt. Evolve. Scale.

When business needs and goals evolve, especially in times of uncertainty, being able to quickly pivot to better serve clients and customers is critical.

Microsoft Power Apps can help you meet changing needs by rapidly deploying business applications, consolidating and streamlining databases, and scaling as you grow.

At its core, PowerApps enables you to quickly build low-code apps. Its prebuilt templates and drag-and-drop functionality mean people who aren't tech experts can still build apps, using language they can understand.

Accelerate your impact

It can be challenging to know exactly where to start with your app to make sure the end product is truly providing value. How do you move from ideation to prototype? How do you know what capabilities and features you need to include or how to begin scaling the foundation of what you build?

That's where Wipfli comes in. We work with organizations to not only get off the ground but also add customization that meets their exact needs.

Our team takes your organization through an ideation process to define your challenges and requirements and then help design a framework and roadmap that aligns to your overall organizational strategy. As a Microsoft Preferred Power Apps Advanced Partner, Wipfli is the team you can count on to guide you through design, implementation and training to enable you for success.

> " Our staff has a higher confidence level in our data, and issues with our time tracking is a thing of the past."

WIPFLI

The solutions you need. Right now.

Wipfli's Power Apps development and consulting services can help your organization:

Increase agility

Build apps that modernize your organization's processes, solve your toughest challenges and enable your clients and customers to better interact with you.

The apps you can build are highly scalable, with broad distribution abilities, allowing you to quickly put data into the hands of end-users.

Gain power through integration

You can connect Power Apps across the entire Microsoft ecosystem — from Office 365 to Azure to Dynamics 365 — helping you build more powerful, innovative apps.

Eliminate siloes and scale both in size and breadth of areas covered.

Remove your limits

Use Power Apps to build whatever type of app you need. Resource-tracking, employee and client/customer collaboration and self-service, scheduling and time-tracking, online ordering, curbside pickup, digital resources and education — these are all capabilities Power Apps can help you create. And Wipfli can help you further customize its capabilities to your needs.

Increase your speed to impact

Leverage the Wipfli team's experience to get up and running faster. We've built dozens of Power Apps and have a firm ideation and creation process, enabling a quick deployment period for a more immediate impact.

Leverage the full Power Platform

Wipfli can also assist you with leveraging the full Microsoft Power Platform, which brings together integrated solutions that can be implemented to meet your organization's needs. The Power Platform enables you to:

- Manage and engage clients and key relationships with internal- and/or external-facing portals
- Consolidate and analyze customer data with Customer Insights
- Analyze data and report on KPIs with Power BI
- Create intelligent chatbots through Power Virtual Agents
- Leverage workflow and automation across business applications with Power Automate

Wipfli provides strategic analysis and design to help guide organizations through their technology strategy and roadmap on Microsoft's platforms.

Let's get started

Contact us for a free Power Apps assessment. We will discuss your challenges and whether Power Apps would be the right fit to increase your speed to impact.
